

▷ Beechcraft King Air 350 1983

Origin USA

Engine 2 x 1,050 hp Pratt & Whitney Canada PT6A turboprop

Top speed 360 mph (580 km/h)

Originally called Super King Airs (the "Super" was dropped several years ago), the 350 is the largest and most powerful aircraft in the King Air range, which is the bestselling family of business aircraft ever produced. Noticeably different from smaller King Airs because it is fitted with a T-tail. The 350 remains in production as the 350i.

◁ Beechcraft Model 2000 Starship 1986

Origin USA

Engine 2 x 1,200 hp Pratt & Whitney Canada PT6A turboprop

Top speed 385 mph (620 km/h)

Innovative in design and striking to look at, the all-composite, canard Starship promised much but delivered little, being heavier and more expensive than the King Airs it was intended to replace. Only 53 were built and most have been brought back and scrapped.

▷ Beechcraft 1900D 1987

Origin USA

Engine 2 x 1,279 hp Pratt & Whitney Canada PT6A turboprop

Top speed 322 mph (518 km/h)

Based on the King Air series, the 1900D is designed to be flown by one pilot, although two are mandatory for airline operations. It has 19 passenger seats and is the best selling aircraft in its class.

△ Gulfstream GIV 1985

Origin USA

Engine 2 x 13,850 lb (6,274 kg) thrust Rolls-Royce Tay 611 turbofan

Top speed 581 mph (935 km/h)

Notable for its large cabin and long range, the GIV is mostly used for business, although a large number of air forces also operate the type, mostly for executive/VIP transport.

▷ NDN.6 Fieldmaster 1987

Origin UK

Engine 750 hp Pratt & Whitney Canada PT6A turboprop

Top speed 165 mph (266 km/h)

One of the first western agricultural planes to be powered by a turboprop, the Fieldmaster was designed by Britten-Norman founder Desmond Norman. Despite having several innovative features, the design was not a success.

▽ Socata TBM 700 1988

Origin France

Engine 700 hp Pratt & Whitney Canada PT6A turboprop

Top speed 344 mph (555 km/h)

Based on a Mooney design and intended as a joint venture between Socata and Mooney (the TB stands for Tarbes, where Socata is located and the M for Mooney) the TBM 700 has more than twice the power of the original.
