

Two-crew Cockpits

By the 1980s air travel had changed once again. Although many industry observers had felt that the propeller had had its day, the 1973 oil crisis made airline executives realize that for short, and even some medium-haul, routes the turboprop still had its part to play. Jets changed too, with even the giant 747 now needing only a two-crew cockpit.

△ **Boeing 757 1983**
Origin USA
Engine 2 x 43,100 lb (19,524 kg) thrust Rolls-Royce RB-211
Top speed 530 mph (853 km/h)

An interesting aspect of the narrow-body 757 is that it was developed concurrently with the wide-body 767 and shares many features, such as the cockpit layout. This allows pilots to operate both aircraft on the same Type Rating.

△ **CASA C212-300 1984**
Origin Spain
Engine 2 x 900 hp Garrett TPE331 turboprop
Top speed 230 mph (370 km/h)

Introduced in 1974 the C212 is still in production today, both in Europe and Indonesia. Unusually for a turbine-powered aircraft, it is non-pressurized and has a fixed undercarriage, making it relatively cheap to buy and maintain, and also very reliable.

▷ **Boeing 747-400 1989**
Origin USA
Engine 4 x 59,500 lb (26,954 kg) thrust Rolls-Royce RB-211-524 turbofan
Top speed 613 mph (988 km/h)

The bestselling version of the original “jumbo jet,” the 747-400 is quite different from earlier versions, even though it strongly resembles the 747 “Classic.” It has a two-crew cockpit, winglets, and more fuel-efficient engines.

◁ **EMB120 Brasília 1985**
Origin Brazil
Engine 2 x 1,800 hp Pratt & Whitney Canada PW118 turboprop
Top speed 378 mph (608 km/h)

Having enjoyed considerable success with the Bandeirante, Brazilian airframer Embraer began work on a larger commuter turboprop. Popular with regional airlines, the Brasília has been described as a modern DC-3.

▷ **Dornier Do 228-101 1985**
Origin Germany
Engine 2 x 770 hp Garrett TPE331 turboprop
Top speed 269 mph (433 km/h)

This twin turboprop utility aircraft benefited from Dornier’s experience of short takeoff and landing design with the Do28 Skyservant. Built in Germany and also in India by HAL, around 240 were produced and well over 100 remain in service.
