

▷ **Dassault Falcon 900B 1991**

Origin France
Engine 3 x 4,750 lb (2,155 kg) thrust Honeywell TFE731-5BR-1C turbofan
Top speed 662 mph (1,065 km/h)

The 900B added more powerful engines and increased range to the 1984-launched corporate jet. It was the only one of its kind (with its sister Falcon X) with three engines. Developed versions are still made.

▽ **Pilatus PC-12 1994**

Origin Switzerland
Engine 1,200 hp Pratt & Whitney Canada PT-6A-67B turboprop
Top speed 313 mph (504 km/h)

This popular business transport aircraft has been steadily developed and continues in production with over 1,000 made. With a single engine, it was relatively inexpensive.

◁ **Gulfstream GV 1995**

Origin USA
Engine 2 x 14,750 lb (6,690 kg) thrust Rolls-Royce BR710A1-10 turbofan
Top speed 674 mph (1,084 km/h)

One of the first ultra-long-range business jets, able to fly up to 7,456 miles (12,000 km), the GV could cruise at 51,000 ft (15,545 m). It was sold to the US Air Force, Navy, and Coastguard as well as private buyers.

▷ **Sino Swearingen SJ30-2 1996**

Origin USA
Engine 2 x 2,300 lb (1,243 kg) thrust Williams International FJ44-2A turbofan
Top speed 528 mph (850 km/h)

This little-known business jet has a cramped fuselage but exceptional fuel economy and range, and a high cruise speed. This is aided by class-leading pressurization, which allows it to fly at high altitude.

◁ **Scaled Composites Proteus 1998**

Origin USA
Engine 2 x 2,293 lb (1,040 kg) thrust Williams FJ44-2 turbofan
Top speed 313 mph (504 km/h)

Innovator Burt Rutan designed this all-composite airframe, high-altitude, high-endurance twin-wing research craft, which could be flown by pilots or remotely. It could orbit at 65,000 ft (19,812 m) for more than 18 hours.
