

Europe Challenges the US

Although for many years the airliner market in the west had been dominated by American manufacturers such as Boeing and McDonnell Douglas, during the 1990s sales of the range of aircraft from Europe's newer Airbus Industrie surged. A significant factor in the success of Airbus was the commonality of the various aircraft's cockpits, with the A318, 319, 320, 321, 330, and 340 in particular having very similar layouts.

△ **McDonnell Douglas MD-11 1990**
Origin USA
Engine 3 x 60,000 lb (27,180 kg) thrust Pratt & Whitney PW4460 turbofan
Top speed 587 mph (945 km/h)

Developed from the DC-10, the MD-11 is in many ways a very different aircraft. Fitted with electronic digital instrument displays and operated by two pilots, the fuselage is longer than the DC-10's, while the tailplane is smaller.

△ **BAe Jetstream 41 1991**
Origin UK
Engine 2 x 1,650 hp Allied Signal TPE331-14 turboprop
Top speed 340 mph (547 km/h)

A "stretched" version of the earlier Jetstream 31, the 41 can carry up to 30 passengers. It is powered by significantly more powerful Allied Signal engines and features an electronic flight instrument system. Around 100 have been built; Eastern Airlines operates the largest fleet of 23 aircraft.

△ **BAe 1000 1990**
Origin UK/USA
Engine 2 x 5,200 lb (2,359 kg) thrust Pratt & Whitney PW305 turbofan
Top speed 522 mph (840 km/h)

With a lineage stretching back to the 1962 DH125 Jet Dragon, the BAe 1000 is the intercontinental version of this popular business jet.

△ **Fokker F100 1990**
Origin Netherlands
Engine 2 x 13,850 lb (6,274 kg) thrust Rolls-Royce Tay turbofan
Top speed 525 mph (845 km/h)

Having achieved considerable success with its F28, Dutch airframer Fokker took the basic design, stretched it, and added upgraded avionics, more powerful engines, and a redesigned wing. The F100 sold well initially, but only 283 were built.

△ **Canadair Regional Jet CRJ200 1992**
Origin Canada
Engine 2 x 9,220 lb (4,177 kg) thrust General Electric 34 turbofan
Top speed 505 mph (812 km/h)

Based on the Canadair Challenger business jet, the CRJ200 is a regional jetliner manufactured by Canadian airframer Bombardier. The type first flew in 1991, and over 1,000 were built before production ceased.

△ **Airbus A340 1993**
Origin Multinational
Engine 4 x 35,242 lb (15,402 kg) thrust CFM-56 turbofan
Top speed 563 mph (906 km/h)

The largest aircraft at the time in the Airbus family, the A340 was produced with four different fuselage lengths and powered by a variety of different engines. The aircraft has a phenomenal range, and is used on long-haul flights.

△ **Ilyushin Il-96-300 1992**
Origin Russia
Engine 4 x 35,242 lb (15,965 kg) thrust Aviadvigatel PS-90A turbofan
Top speed 559 mph (900 km/h)

A shortened version of the Il-86 (Russia's first wide-body airliner) the Il-96 has many advanced features, including a super-critical wing, winglets, fly-by-wire controls, and electronic flight instrument systems.
