

Compensation tube
Evens out pressure impulses that would otherwise affect carburation.

Ignition leads
Electronic ignition module is located at the rear, near the right-hand carburettor.

Propeller drive flange

Induction manifold

Constant-depression carburettor
Provides excellent fuel economy.

Water pump and cooling pipes

Reduction gear housing

Combination cooling
The Rotax 912 differs from conventional aircraft engines in its combination of air-cooled cylinders with liquid-cooled heads.

Cylinder head coolant pipe

Upper spark plug

Exhaust port
Pipes run forward from front heads, rearward from back heads.

Pushrod tube
The valves are operated via self-adjusting hydraulic tappets.

Spin-on oil filter
A disposable service item, as used in car engines.

Engine stand
(for display only)

Oil supply connection
The engine has a dry sump and separate 0.79-gallon (3-liter) oil tank.

Oil pump
Driven from the end of the camshaft.
