

Eurofighter Typhoon

Fast, agile, and well equipped with sensors and weapons, this advanced tactical fighter is one of the world’s leading combat aircraft. Its excellent maneuverability, acceleration, and climb rate make it a formidable foe in air-to-air battles. In training exercises, it has proved itself superior to both the F-15 Eagle and the F-16 Fighting Falcon and has even proved a worthy adversary to the mighty F-22 Raptor.

DEVELOPED AND PRODUCED by the UK, Germany, Italy, and Spain, the Eurofighter Typhoon first flew in 1994. Typical of modern European fighters, it has the canard delta configuration, with foreplanes ahead of the wings. The aircraft is very light because 82 percent of the surface area is made of composites. This, combined with its very powerful turbofan engines, is the key to its extraordinary performance levels.

In addition to the nations that produced it, the Typhoon serves with Austria and Saudi Arabia. It can perform both fighter and bomber roles. Typhoons first went to war in 2011, attacking Gaddafi’s loyalist forces in Libya using Enhanced Paveway II precision bombs. Considered by many to be second only to the F-22 in overall air-to-air combat capabilities, in close-in dogfights the European fighter enjoys an advantage.

SPECIFICATIONS	
Model	Eurofighter Typhoon FGR4, 2007
Origin	UK, Germany, Italy, and Spain
Production	341
Construction	Carbon fiber composites, lightweight alloys, titanium, glass-reinforced plastics
Wingspan	35 ft 10 in (10.95 m)
Length	52 ft 5 in (15.96 m)
Maximum weight	52,000 lb (23,500 kg)
Engines	2 x 20,000 lb (9,060 kg) thrust EJ200 turboFAN
Range	2,350 miles (3,790 km) ferry range
Top speed	1,538 mph (2,475 km/h)
