

△ **Royal Aircraft Factory
R.E.8 1916**

Origin UK

Engine 140 hp Royal Aircraft
Factory 4a air-cooled V12

Top speed 103 mph (166 km/h)

Slow, cumbersome, and difficult to fly, the R.E.8 was better armed and carried a greater payload than its B.E.2c predecessor. More than 4,000 were built, and they performed well in skilled hands.

◁ **Junkers J4 (JI) 1917**

Origin Germany

Engine 200 hp Benz Bz.IV
water-cooled 6-cylinder in-line

Top speed 97 mph (155 km/h)

Dr. Hugo Junkers pioneered this all-metal aircraft. The ground-attack machine's 0.2 in (5 mm) thick steel "bathtub" was both structure and armor protection; 227 were built. Most served on the Western Front.

◁ **LVG C.VI 1917**

Origin Germany

Engine 200 hp Benz Bz.IV
water-cooled 6-cylinder in-line

Top speed 103 mph (166 km/h)

Designed by Willy Sabersky-Müssigbrodt, the C.VI had a semimonocoque wooden fuselage. Chiefly used for reconnaissance, it continued in service as late as 1940 in Lithuania.

▷ **Vickers F.B.5 Gunbus 1914**

Origin UK

Engine 100 hp Gnome
Monosoupape 9-cylinder rotary

Top speed 70 mph (113 km/h)

The F.B.5 was one of the first aircraft designed for air-to-air combat. Its weight and inefficient pusher design with wing-warping control meant that it rapidly became outdated.

◁ **Airco DH9A "Ninak" 1918**

Origin UK

Engine 400 hp Packard Liberty
12A water-cooled V12

Top speed 123 mph (198 km/h)

Airco struggled to find a powerful enough engine for the DH9, but with the US-built Liberty engine it was a great success, staying in service until 1931. Many replicas were built in Russia too.
