

△ **Rolls-Royce ACCEL 2020**

Origin UK

Engine 500 hp (370 kW) 3 x YASA coaxial electric motor combination

Top speed over 300 mph (480 km/h)

Based on the Sharp Nemesis NXT racer and intended to fly in 2020, the ACCEL (Accelerating the Electrification of Flight) is designed to set a new all-electric air speed record. In 2017, the Siemens ExtraLE 330 set it at 209.7 mph (337.5 km/h).

△ **Pipistrel Velis Electro 2020**

Origin Republic of Slovenia

Engine 77.2 hp (57.6 kW) Pipistrel E-811-268MVLC electric motor

Top speed 113 mph (182 km/h)

The first-ever electric-powered aircraft to be certified was not the product of some giant US corporation or European consortium, but a two-seat trainer designed and built in a country of barely more than 2 million people.

▷ **Condor Rocket 2020**

Origin UK

Engine 2 x 215 hp (160 kW) electric motors

Top speed over 300 mph (480 km/h)

Designed to compete in the new Air Race E pylon race series for electric aircraft, Condor Aviation's Rocket features contrarotating propellers and is destined to be used in the company's attempt to beat the all-electric air speed record.

▷ **CityAirbus 2019**

Origin European consortium

Engine 8 x 134 hp (100 kW) electric motors

Top speed 75 mph (120 km/h)

Based on the quadrotor layout of small hobbyist and commercial drones, but with paired motors and rotors for greater safety, the pilotless CityAirbus is designed for aerial urban ride sharing and will carry up to four passengers over fixed routes.

△ **Amazon Prime Air prototype 2016**

Origin US

Engine 4 x electric motor

Top speed limited to 100 mph (161 km/h)

Amazon's Prime Air drone delivery system has been under development since it was announced in 2013. The first private trial delivery was made on December 7 2016, using the unnamed aircraft illustrated. Different designs are being tested.
