

△ de Havilland DH34 1922

Origin UK

Engine 450hp Napier Lion liquid-cooled 12-cylinder broad arrow

Top speed 128 mph (206 km/h)

Essentially a larger version of the DH18, an unusual feature of this aircraft was the ability to carry a spare engine in the cabin, as both the door and fuselage were specifically designed to allow this. However, the spare greatly reduced the payload.

△ de Havilland DH50J 1923

Origin UK

Engine 450 hp Bristol Jupiter IV air-cooled radial

Top speed 112 mph (180 km/h)

Designed to replace the war-surplus DH9, the DH50 enjoyed an excellent start to its career when aviation pioneer Alan Cobham (later Sir Alan) won a reliability trial in the prototype, only four days after its maiden flight.

△ Boeing 80 1928

Origin USA

Engine 3 x 450hp Pratt & Whitney Wasp air-cooled 9-cylinder radial

Top speed 138 mph (222 km/h)

This three-engine biplane was used by Boeing's own airline, Boeing Air Transport. Other trimotor airliners were monoplanes. Boeing opted for a biplane configuration for improved takeoff and landing performance.

△ Ford 5-AT Tri-motor 1928

Origin USA

Engine 3 x 420 hp Pratt & Whitney Wasp air-cooled 9-cylinder radial

Top speed 150 mph (241 km/h)

Although the Ford Tri-motor strongly resembled the contemporary Fokker, it was an all-metal machine, with far more powerful engines. Nicknamed the "Tin Goose," Ford built 199 Tri-motors, and several are still airworthy today.

△ Junkers G38 1929

Origin Germany

Engine 2 x 690 hp Junkers L55 liquid-cooled V12 inboard, 2 x 413 hp Junkers L8a liquid-cooled in-line 6 outboard

Top speed 140 mph (225 km/h)

Junkers only built two G38s, but at the time they were the largest aircraft in the world. The wings were so thick that there was room for passengers in the leading edges.

△ Sikorsky S38 1928

Origin USA

Engine 2 x 400 hp Pratt & Whitney Wasp air-cooled 9-cylinder radial

Top speed 120 mph (192 km/h)

Sikorsky's first amphibian to sell in large numbers, the S-38 was particularly popular with explorers and adventurers, although it was also operated by many airlines and the armed forces of several countries.

△ Dornier Do-X 1929

Origin Germany

Engine 12 x 610 hp Curtiss Conqueror liquid-cooled V12

Top speed 131 mph (211 km/h)

A truly remarkable machine, the Do-X set many records, including being the heaviest and largest aircraft of its time, and also carrying the greatest number of passengers—an incredible 169.
