

HUNTING TOOLS

Inventions that made modern humans successful hunters included bows and arrows and spear-like barbed harpoons for fishing. Spear throwers, which allowed hunters to hurl spears across longer distances, were often decorated with carvings of the animals, such as mammoths.

HUMAN JOURNEYS ▲

The people who settled the world were hunter-gatherers. They had to keep moving to find fresh sources of food. After leaving Africa, they kept first to the warm south, and then continued eastward, following the coasts, which were rich in resources. They later ventured into the colder climates of northern Asia and the Americas.

30,000–20,000 YA

The climate enters a phase of severe cold. Many large animals, such as mammoths, become extinct, partly due to hunting by humans.

23,000–13,000 YA

People move from East Asia into North America, crossing a land bridge created by low sea levels.

12,000–11,000 YA

Global warming causes ice sheets to melt, creating a warmer climate. People begin to settle down, taking the first steps to farming.

▲ END OF THE ICE AGE

The end of the Ice Age, around 12,000 years ago, created a warmer, wetter climate. Cave paintings from the Sahara Desert show people hunting cattle with bows and arrows. The region, which was previously dry and arid (as it is now), had become green and fertile.
