

Gas & electricity

If you are renting premises, be aware of the landlord's responsibilities to provide electrical and gas safety checks. Inspect for defective plugs, broken switches, and damaged cables; make repairs a priority.

Machinery & equipment

Fit guards around dangerous machine parts, display warning notices, and ensure operatives are fully trained. Protect equipment users against excessive noise, heat or cold, vibration, and radiation.

Trips and falls

Make sure that lighting is adequate and that floors are nonslip and kept free of obstructions. Clearly mark any sudden changes in floor height. Supply stable ladders for staff working at heights.

Personal protection

Issue staff the appropriate clothing and equipment to give them adequate protection in their work, such as face masks, earmuffs, safety boots, gloves, and helmets.

Lifting and moving objects

Teach staff how to lift objects safely, and discourage moving items that could cause injury. Store heavy objects on low shelves. Supply carts or other equipment for moving large stock items and materials.

Vulnerable people

Some individuals, for example, pregnant women and people with disabilities—whether employees, clients, customers, or visitors—will need special consideration when on your premises.

Safety notices

Clearly display signs that follow local regulations and reinforce workplace safety procedures such as hygiene and waste disposal routines, hazard warnings, and what to do in the event of fire.

First aid

Give first-aid training to employees. Ensure that first-aid supplies are readily accessible and that injured persons get immediate attention. Appoint a safety officer to report and record all incidents.
