

USING TOMATOES

Tomatoes are easy to grow and need less frequent watering if grown directly in the ground or in a raised bed—the volume of soil retains more water and nutrients than potting soil in a container.

Many tomatoes grow happily on sunny patios and make decorative displays when matched with other sun-lovers.

Containers for tomatoes can produce a successful crop if they are large, mulched, watered often, and fertilized to provide important nutrients.

Compact dwarf bushes, such as the trailing, cherry-fruited Tumbler types, are perfect for large hanging baskets in sheltered sites.
