

Recipes for shady sites

LEAFY WOODLAND CLEARING

The focus of this planting group is the purple-leaved European filbert, which will color up well in light dappled shade. Globeflower, spurge, and cranesbills are also best in part shade, but you can tuck the lady's mantle in a darker corner because it will grow almost anywhere. If you have space, squeeze in a few ferns, such as a shield fern or male fern, both of which tolerate deep shade. For a native alternative to the European filbert consider an eastern redbud. Select *Cercis canadensis* 'Forest Pansy' for its rich purple leaves or *C. canadensis* 'Hearts of Gold' for its bright chartreuse foliage. Pink pealike blooms that emerge in spring prior to the foliage are also a striking feature of this tree.

Plant list

- | | |
|------------------------------|------------------------------|
| 1 <i>Alchemilla mollis</i> | 4 <i>Corylus avellana</i> |
| 2 <i>Euphorbia</i> species | 'Fuscorubra' |
| 3 <i>Trollius x cultorum</i> | 5 <i>Geranium sylvaticum</i> |
| | 'Alba' |
