

FOLIAGE BORDER FOR AN URBAN SPACE

This sophisticated combination will offer lasting color in a cool, shady urban garden. The fern and barrenwort are evergreen, creating permanent cushions of foliage, while the columbines form dainty late spring flowers in pastel shades of pink, blue, purple, and white. They tend to self-seed prolifically, so deadhead the blooms promptly to contain them. Tufted hair grass adds textural contrast to the mix and is one of the few grasses that performs best in shade.

Plant list

- 1 *Epimedium perralderianum*
- 2 *Polystichum* species
- 3 *Deschampsia cespitosa*
- 4 *Aquilegia vulgaris* (granny's bonnet)

COLORFUL MIX FOR A CONTEMPORARY POT

While most summer bedding plants prefer full sun, a few tolerate part shade, and are particularly useful in urban gardens that are shaded by buildings. The best include fuchsias, trailing lobelia, mintleaf, and impatiens—opt for disease-resistant New Guinea types. Upright fuchsias make strong statement features for the center of a display, while trailing lobelia and mintleaf add a decorative frill. Squeeze the impatiens in between to add bright highlights.

Plant list

- 1 *Lobelia erinus*—trailing form
- 2 Tender fuchsia—bedding variety
- 3 *Impatiens*—white form
- 4 *Plectranthus madagascariensis* 'Variegated Mintleaf'
