

Late-summer large-flowered forms These bear large colorful flowers from midsummer to early fall on the current season's stems; prune them hard in spring.

Late-flowering species This group includes *C. tangutica* and *C. orientalis*, with their dainty nodding flowers, and the vigorous small-flowered *C. rehderiana* and *C. flammula* species.

Winter interest Many late-flowering clematis produce attractive fluffy seedheads that may persist into winter. These include *C. tangutica*, *C. orientalis*, *C. rehderiana*, and *C. flammula*.
