

The world of mammals

Gorilla skeleton

The skeleton

Mammals may look very different, but stripped back to the bone, we all have the basic bony skeleton. Scientists call us vertebrates – animals with a backbone.

Mammals include animals such as the whale, the kangaroo, and you and me! We all have fur, we are warm-blooded, and we feed new babies our milk.

Mammal babies

Most mammal females give birth to live babies, rather than laying eggs. The baby grows inside the mother's body until it is born.

Feeding babies

All female mammals produce milk from their bodies that they feed to their babies; this feeding is called suckling. The milk helps babies to grow.
