

Marsupials

A marsupial is a mammal with a pocket, called a pouch, for carrying its babies in.

Koala

Koalas look like little bears. They live in Australia and are the only animal that eats eucalyptus leaves. They are so hard to digest that koalas spend 19 hours of the day sleeping to let their tummies settle.

Little devil

The Tasmanian devil is not much bigger than a small dog but it is very aggressive. It is the biggest meat-eating marsupial and has such powerful jaws that it can eat the entire animal – bones and all!

More marsupials

Apart from a few that live in South America, almost all marsupials come from Australasia. They vary a lot in looks.

Dorian's tree kangaroo: this small kangaroo can climb trees.

Numbat: this marsupial feeds almost entirely on ant-like termites.

Rabbit-eared bandicoot: These large-eared burrowers are most active at night.

Bouncing marsupials

Kangaroos cannot walk. Instead they have enormous back legs that they use to jump everywhere. They can move very fast just by leaping.

A kangaroo's front legs are...
