

Nesting

All birds lay eggs, which other animals find tasty. To keep their eggs safe, many birds build nests.

A city in a nest

Some weavers, called social weavers, build one huge nest to hold lots of birds. This only happens in dry regions, because if it got too heavy with rain it would fall.

Hummingbirds are the smallest birds in the world.

Weaver bird

Out of reach

The most important thing about a nest is that no enemies can reach it. For this reason many birds build their nest in trees.

Weaver birds go one step further than building nests in trees; they build them hanging down from branches.

Tiny home

This hummingbird has built its nest on a fir cone. Some hummingbirds use spiders' webs to secure their nests.
