

Reptiles and amphibians

Reptiles and amphibians are the “cold-blooded” creatures of our world. Most amphibians, which include frogs and toads, live near water. Reptiles, such as snakes and lizards, are found both on land and in water.

Flying gecko

Baby caiman

Green tree python

Anole lizards

Baby spectacled caiman

Common snake-necked turtle

Common snapping turtle

Madagascan day gecko

Rattlesnake

Cold-blooded

Cold-blooded creatures do not have cold blood. Cold-blooded means they are the same temperature as the air or water around them. If they are cold, they sunbathe. If hot, they seek shade.
