

# Color wheel

The color wheel is a classic device that shows how the six main colors—red, purple, blue, orange, green, and yellow—relate to one another. The color wheel contains the three primary colors and three secondary colors. Primary colors—red, yellow, and blue—

cannot be mixed from any other colors. Secondary colors—orange, purple, and green—are mixed from two primary colors. The colors between the primary and secondary colors on the wheel are known as intermediate colors.
